

SHRINATH PRABHU

Senior Staff Frontend Engineer | Vue • React • TypeScript • Node.js

Mumbai, India · Remote (8+ years in software engineering)

shrinath.me | hello@shrinath.me | github.com/shrinathprabhu | linkedin.com/in/shrinath-prabhu

PROFESSIONAL SUMMARY

Senior Staff Frontend Engineer with 8+ years taking Web3 and SaaS products from zero to real users. Lead frontend architecture at Avail, where I conceived Nexus Widgets (used by 10+ dApps) and built Fastbridge (15 EVM chains, ~\$100K monthly volume). Led frontend at Arcana Network for 4.5 years from seed stage through its acquisition by Avail, built SendIt to 65K+ accounts and 20K+ peak DAU, and shipped 4 Chrome Extensions with a 100% approval rate. Founder of OwlEye, cookie-free web analytics built in Rust and ClickHouse.

EXPERIENCE

AVAIL (availproject.org) August 2025 – Present | Remote (Dubai)

Senior Staff Engineer

- Own frontend architecture and technical strategy across Avail's Nexus products (Fastbridge, Widgets, Widget Configurator, SDK Injector extension), setting component library, CI/CD, and architectural standards.
- Conceived, architected, and secured executive buy-in for **Nexus Widgets** (formerly Nexus One / Elements), open-source React components for cross-chain swap, send, and deposit, **used by 10+ dApps**. Shipped as an npm package for config-only integrations and a shadcn registry for teams that want full source control.
- Built the **Widget Configurator**, a live playground with presets and one-click config export, and added **fiat onramping** (card, Apple Pay, bank transfer) to the Deposit Widget via Meld.
- Architected and shipped **Nexus Fastbridge**, a cross-rollup bridge UI with a custom Vite-based SEO solution generating per-chain HTML pages at build time, achieving full SEO without Next.js. **Scaled to 15 EVM chains and ~\$100K swapped and bridged per month.**
- Leading frontend migration to **Nexus v2**, a backend-driven architecture leveraging EIP-7702 to reduce signature requirements via ephemeral wallets. Shipped the Nexus SDK Injector to Chrome Web Store, injecting chain abstraction into DeFi apps (Hyperliquid, Pendle, Yearn, Scroll).
- Extended Nexus beyond EVM through proofs of concept: Gummee, a PWA that lets Tron users swap to and from EVM chains and deposit into EVM yield apps (Aave, Compound), and a Starknet bridge-and-deposit flow. Contributed to ShieldTx (private trading on Hyperliquid) and the Nexus v2 intent explorer.

ARCANA NETWORK (linkedin.com/company/arcana-network) Jan 2021 – Aug 2025 | Remote (Dubai)

(Acquired by Avail Project, 2025)

Lead Frontend Engineer

- Owned the entire frontend engineering function across 4.5 years, from sole frontend engineer to lead. Managed hiring, onboarding, and team continuity through bear market contractions. The frontend team transitioned fully intact into Avail with zero disruption.
- Built **Arcana's Chrome Extension Wallet** from scratch, a non-custodial sidebar wallet supporting 10+ blockchains, transaction signing, dApp injection (Aave, Uniswap, Lido, Hyperliquid), and unified cross-chain balance management. **750+ users, 4.7 star rating** during a bear market. Later extracted into a TypeScript SDK for B2B.
- Built **SendIt**, a gamified cross-chain transfer app replacing wallet addresses with email/X/ENS. **Scaled to 65K+ accounts and 20K+ peak DAU.** Traffic exhausted Netlify Pro limits despite caching, so I migrated the frontend to self-managed AWS.
- Integrated non-EVM chains across Arcana's wallets: Solana and NEAR in the open-source web wallet, and Fuel in the chain abstraction wallet.
- Architected the **Developer Dashboard** from scratch, the primary interface for Web3 developers to register dApps, configure auth providers, and customize the embedded wallet. Vue 3, TypeScript, Chart.js.
- Shipped **Skizzle** in the first month, a Chrome + Firefox extension for E2E encrypted email attachments using InboxSDK and gmail.js, RSA keys via Web3Auth, and decentralized storage. **~1,000 users, 4.2 star rating.**

Full Stack Developer

- Architected **Pricinger**, a privacy-focused Chrome Extension with multi-region VPN proxies (AWS: Albania, Slovenia, India, Greece), geolocation blocking, user agent spoofing, and an automated crawler that identified optimal privacy settings per-site. **~1,000 users, 4 star rating.**
- Built APIs and dashboards for **Jagran** (India's largest media conglomerate) for demographic & psychographic analytics, **QBuild** (construction floor plan annotation), and **8SQM** (NZ car wash booking with GeoJSON).
- Built **Agrostar's** farmer learning platform MVP in a week, a mobile-first app supporting 5 Indian languages with auto-switching video, audio and subtitles. React, Nest.js, TypeScript, Firestore. VP offered a retainer role.

INDEPENDENT PROJECTS & OPEN SOURCE

- **OwlEye Analytics (Founder):** Hosted, cookie-free web analytics for small product teams. Dependency-free TypeScript SDK, Rust + Axum API, ClickHouse event store, SQLite control plane. Tracking rules are defined in the console, no redeloys. Rebuilt from its first version (Outline Analytics, Bun + MongoDB). owleye.dev, github.com/shrinathprabhu/owleye
- **lowkey.tools:** Twelve tiny, free, offline-first browser tools with no accounts, including FuseLLM (bring-your-own-key AI model workflows), Credo (zero-knowledge secret sharing with AES-256-GCM and Argon2id), local-first notes, and bill splitting. Plain HTML, CSS, and JavaScript on Cloudflare Workers. lowkey.tools

SKILLS

- **Architecture & Strategy:** Vue 3, Nuxt 3, React, TypeScript, Chrome Extension Architecture (Manifest V3, content scripts, service workers, script injection), Design Systems, Technical Roadmapping, Team Leadership
- **AI-Augmented Development:** Claude Code, OpenAI Codex, Google Gemini, Antigravity, AI-assisted code review, prompt engineering for development workflows
- **Backend & Data:** Node.js, Bun, Rust (Axum), Express, Fastify, Nest.js, Elysia.js, MongoDB, PostgreSQL, ClickHouse, SQLite, Firebase/Firestore, REST API Design
- **Infrastructure:** AWS (EC2, S3, CloudFront, Route53), Vercel, Netlify, Cloudflare Workers, GitHub Actions, CI/CD Pipelines
- **Domain:** Web3 (non-custodial wallets, cross-chain bridging, chain abstraction, dApp injection, EIP-7702, fiat onramping; EVM, Solana, NEAR, Fuel, Tron, Starknet), Client-Side Encryption (AES-GCM, Argon2id, RSA, zero-knowledge patterns), Privacy-First Analytics

NOTABLE ACHIEVEMENTS

- **Led frontend engineering through a successful company acquisition** (Arcana Network → Avail Project, 2025), ensuring complete technical continuity and IP transition.
- **Shipped 4 Chrome Extensions to Chrome Web Store with 100% approval rate:** a non-custodial wallet (4.7 stars), an end-to-end encrypted email tool (4.2 stars), a privacy-focused pricing optimizer (4 stars, 1,000+ users), and a DeFi SDK injector.
- **Authored "Vue 3 Composition API: Basics and Patterns"**, which ranks on the first page of Google for Vue 3 composition API searches.
- Guest speaker on blockchain technology and privacy at DJ Sanghvi College of Engineering, Mumbai (2023). Open-source CSS architecture demo with 5,000+ views on CodePen.
